

MongoDB Overview

- ▶ NOSQL Introduction & Types
- ▶ Introduction & Basics
- ▶ CRUD
- ▶ Aggregation
- ▶ Indexes
- ▶ Performance Replication & Sharding

8

Module Objectives

What you will learn

At the end of this module, you will learn:

- What is NOSQL

What you will be able to do

At the end of this module, you be able to:

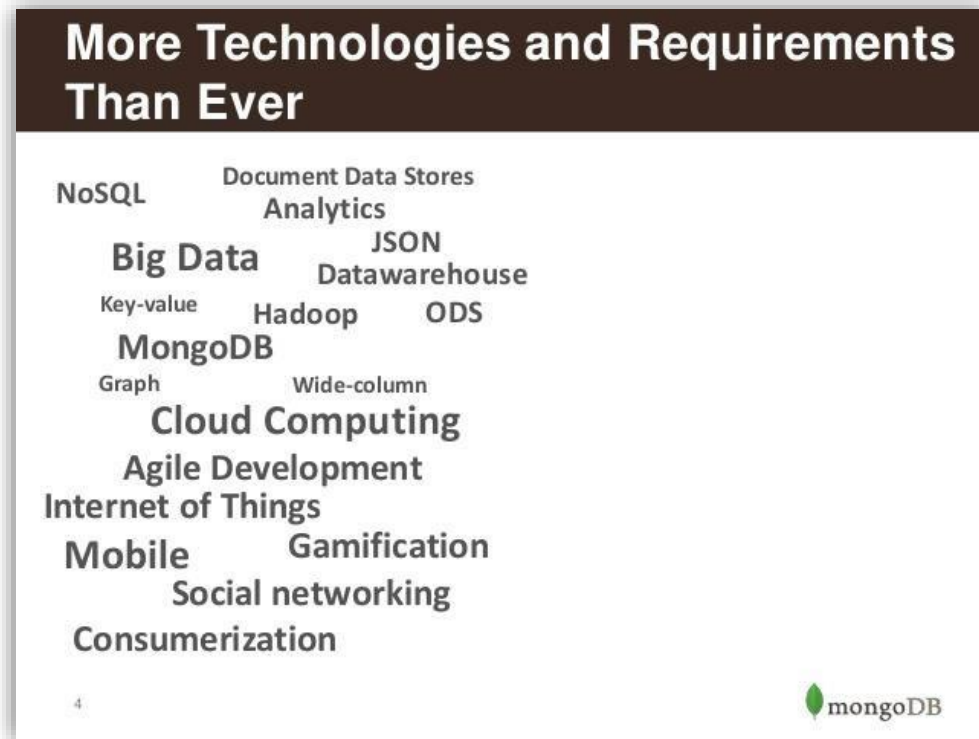

- Understand what is NOSQL
- Describe CRUD
- State the types of NOSQL
- Explain what is Aggregation
- Describe Replication & Sharding

Lets Get Social

10

More Technologies

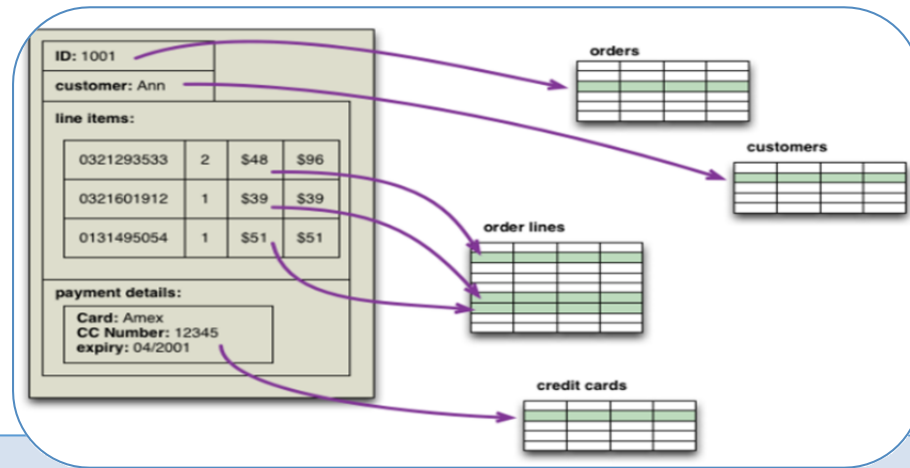

11

Boom of NOSQL

12

Why NoSQL

- Handles Schema Changes Well (easy development)
- Solves Impedance Mismatch problem
- Rise of JSON
 - python module: simplejson

NO SQL (or) BIG Data Env't

Example 1

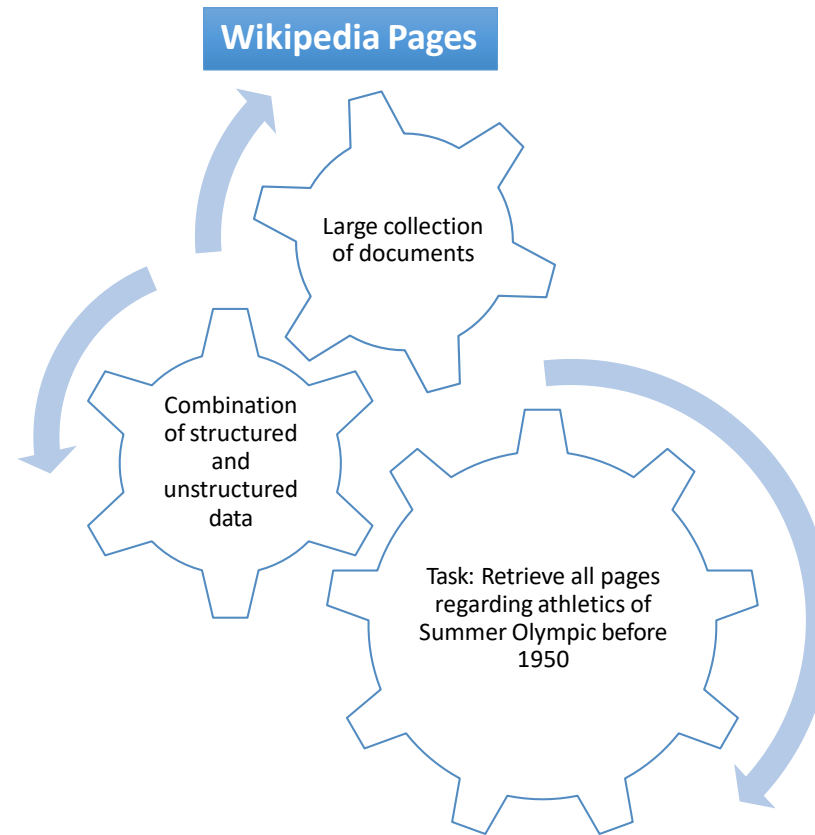

Social Network Graph

Each record: UserID1, UserID2

Separate records: UserID, first_name, last_name, age, gender, ...

Task: Find all friends of friends of friends of ... friends of a given user

Example 2

16

NoSQL Market

What is NoSQL?

Stands for 'Not Only SQL'.

Originally refers to “non SQL” or “non Relational” database.

Term coined by Carlo Strozzi in 1998.

Open Source.

No Rows-Columns / Tables.

No Predefined schema.

Eventually consistency rather than ACID property.

Distributed computing.

Unstructured and unpredictable data.

Prioritizes high scalability ,high availability and scalability.

Replication support .

18

NoSQL Database Types

Key-value

Graph database

Document-oriented

Column family

CAP Theorem

Consistency

- This means that the data in the database remains consistent after the execution of an operation. For example after an update operation all clients see the same data.

Availability

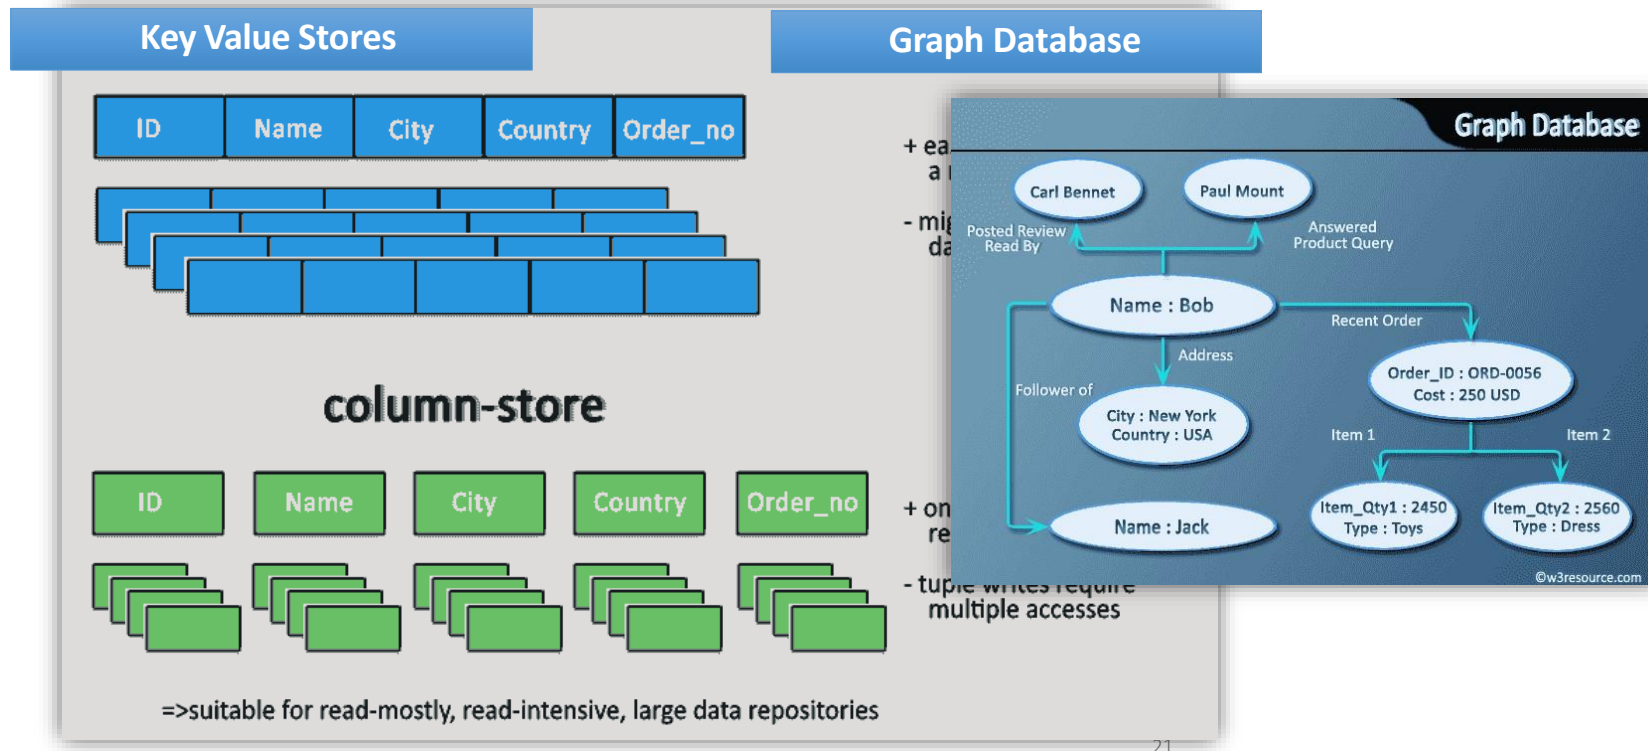

- This means that the system is always on (service guarantee availability), no downtime.

Partition Tolerance

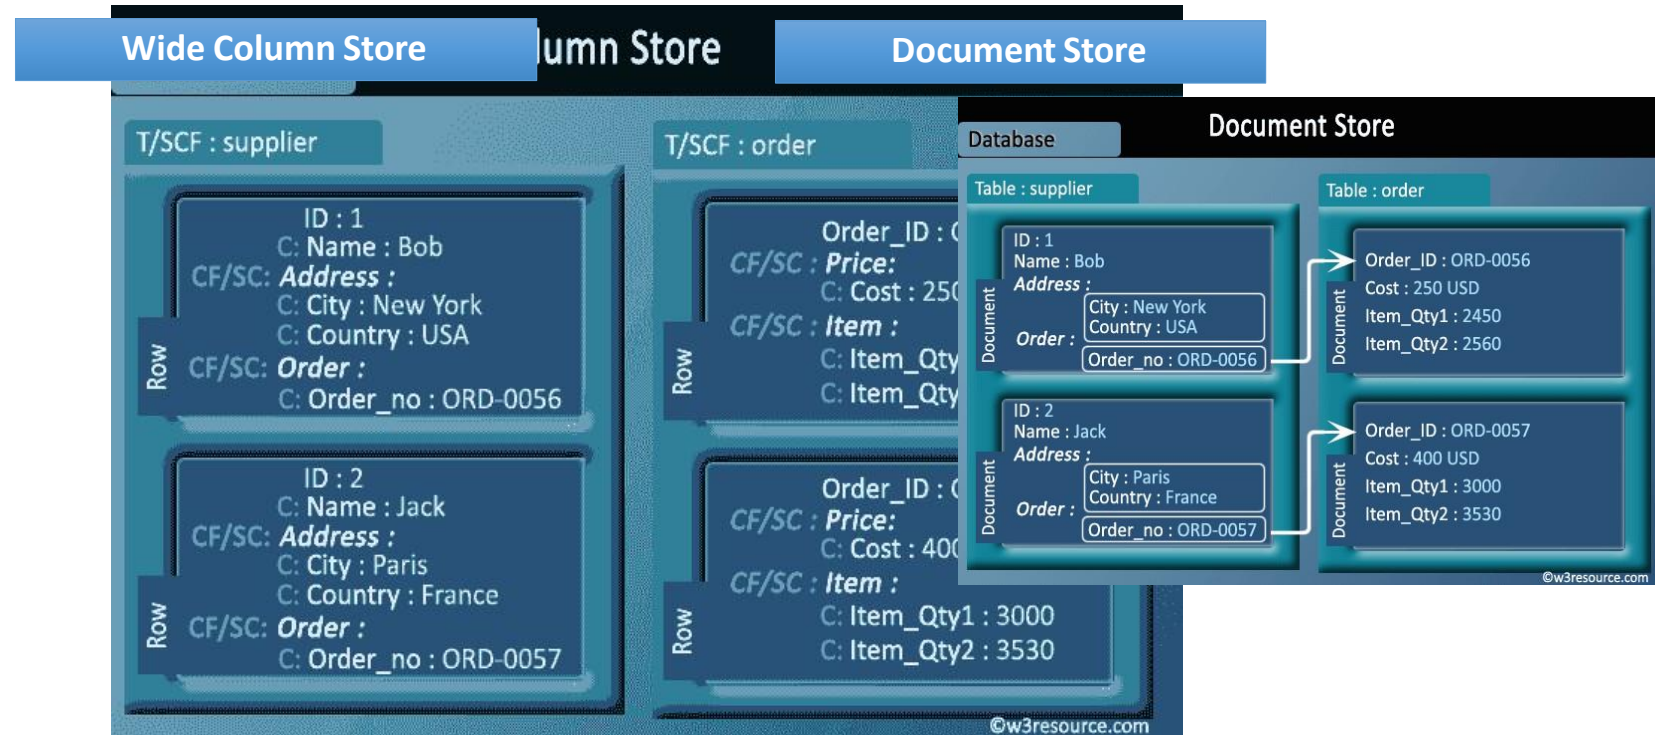

- This means that the system continues to function even the communication among the servers is unreliable, i.e. the servers may be partitioned into multiple groups that cannot communicate with one another.

MongoDB Introduction

MongoDB Philosophy

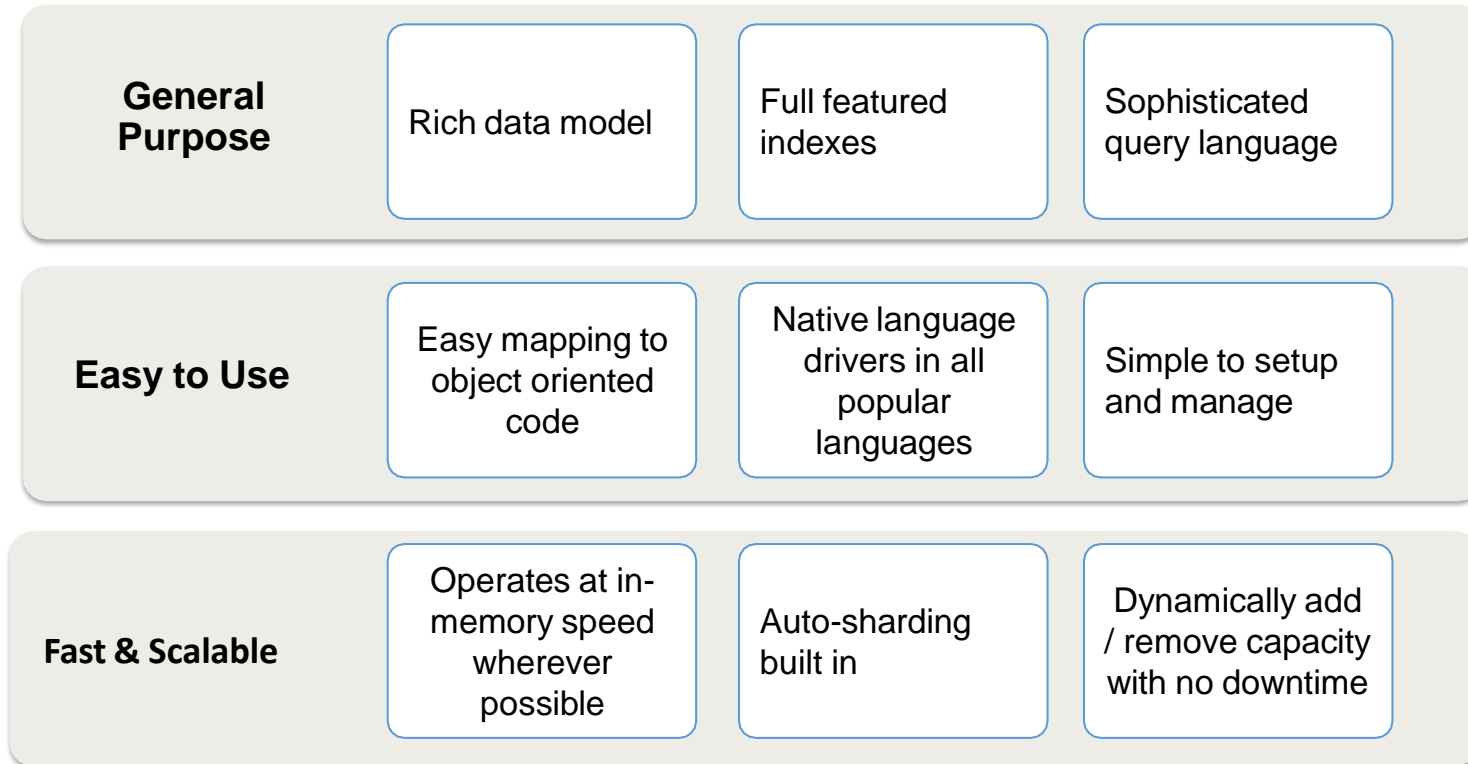

What is MongoDB

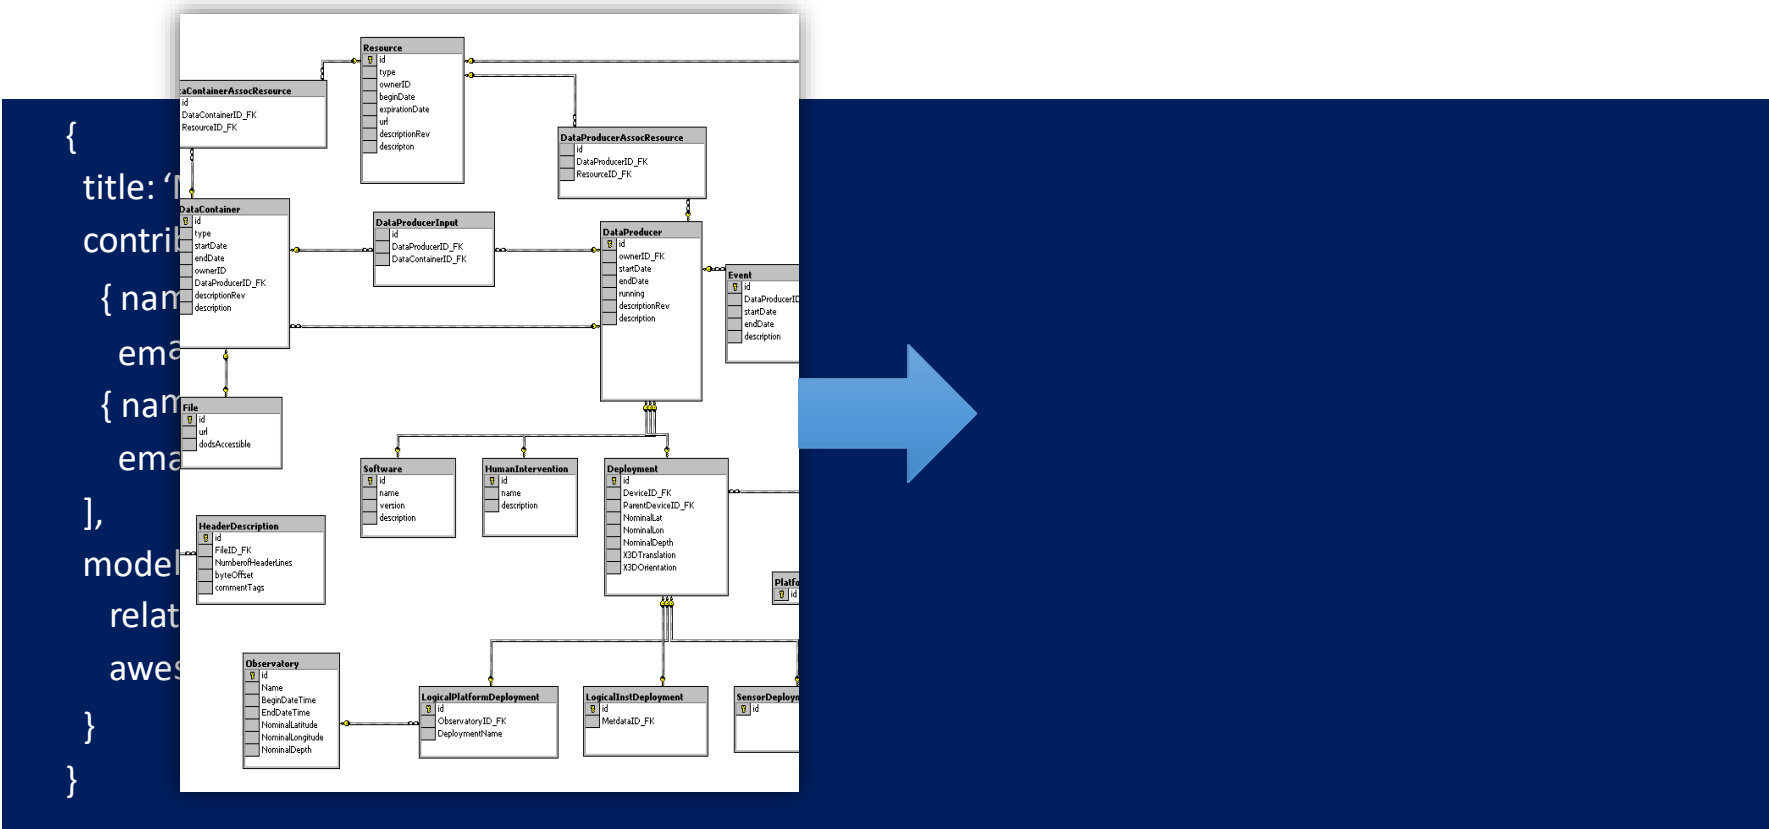

26

MongoDB is:

27

MongoDB is Easy to Use

Schema Free

MongoDB does not need any pre-defined data schema.

Every document could have different data!

```
{name: "will",  
  eyes: "blue",  
  birthplace: "NY",  
  aliases: ["bill", "la  
ciacco"],  
  loc: [32.7, 63.4],  
  boss: "ben"}
```

```
{name: "jeff",  
  eyes: "blue",  
  loc: [40.7, 73.4],  
  boss: "ben"}
```

```
{name: "brendan",  
  aliases: ["el diablo"]}
```

```
{name: "ben",  
  hat: "yes"}
```

```
{name: "matt",  
  pizza: "DiGiorno",  
  height: 72,  
  loc: [44.6, 71.3]}
```

29

MongoDB is Fast and Scalable

Better data locality

In-Memory Caching

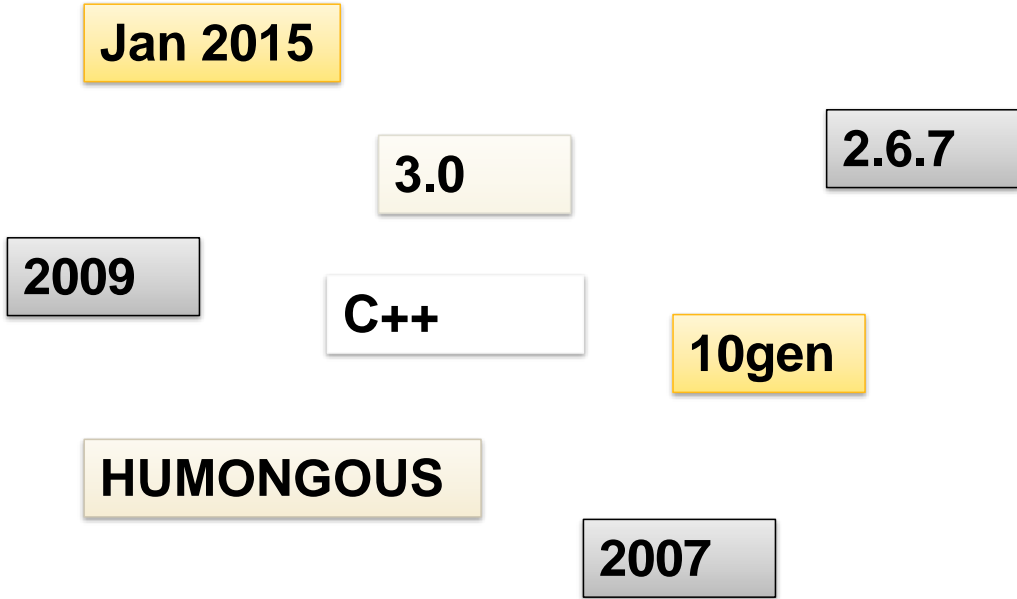

Distributed Architecture

30

History

Features of MongoDB

Document Oriented Database

Adhoc queries

Indexing

High Performance

High Availability

Sharding

Easy Scalability

File Storage

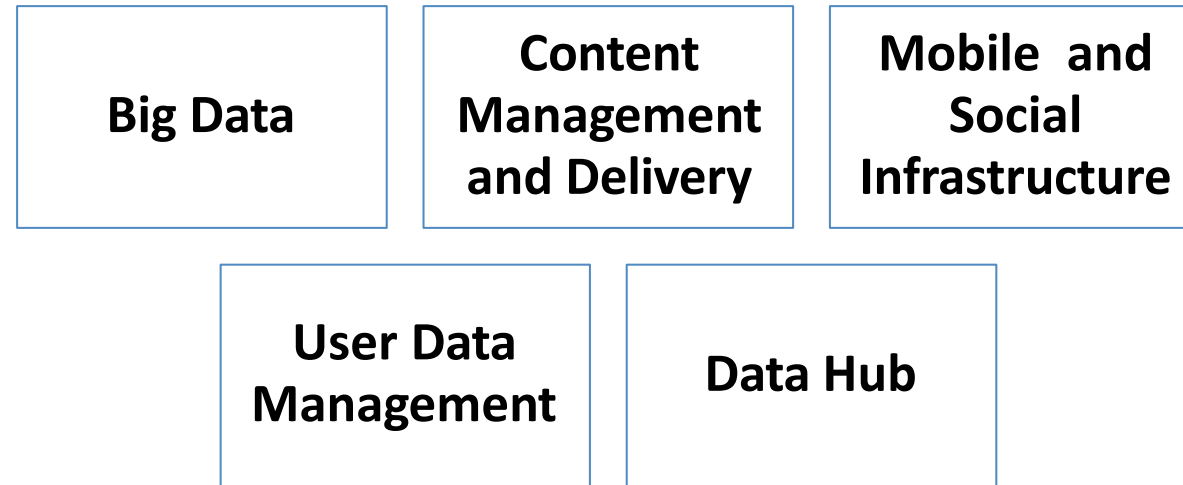

Rich Query Language

Load Balancing

Replication

32

Where should you use MongoDB

MongoDB	SQL
database	database
collection	table
document	record (row)
field	column
linking/embedded documents	join
primary key (_id field)	primary key (user designated)
index	index

MongoDB to SQL Terminology

Important Terminology

Database	<ul style="list-style-type: none">• Database is a physical container for collections. Each database gets its own set of files on the file system. A single MongoDB server typically has multiple databases.
Collection	<ul style="list-style-type: none">• Collection is a group of MongoDB documents. It is the equivalent of an RDBMS table. A collection exists within a single database. Collections do not enforce a schema. Documents within a collection can have different fields. Typically, all documents in a collection are of similar or related purpose.
Document	<ul style="list-style-type: none">• A document is a set of key-value pairs. Documents have dynamic schema. Dynamic schema means that documents in the same collection do not need to have the same set of fields or structure, and common fields in a collection's documents may hold different types of data.

35

MongoDB 's Data Model

36

Data Model

Document based (max 16 MB).

Documents are in BSON formats consisting of field / value pairs.

Each document stored in a collection.

Schema less.

37

Data Model

Document Data Model

Relational

Per_ID	Surname	First Name	City
1	Evans	Paul	London
2	Smith	John	London
3	Miller	John	London
4	Wang	Liwei	Paris
5	Smith	John	London

Car_ID	Model	Year	Value	Per_ID
101	Bentley	1973	100000	1
102	Rolls Royce	1965	300000	1
103	Rolls Royce	1965	300000	2
104	Ferrari	1985	110000	3
105	Bentley	1973	100000	4
106	Bentley	1973	100000	5
107	Rolls	1965	300000	5

NO RELATION

MongoDB

```
{
  first_name: 'Paul',
  surname: 'Miller',
  cell: '+447557505611',
  city: 'London',
  location: [45.123, 47.232],
  Profession: [banking, finance, trader],
  cars: [
    { model: 'Bentley',
      year: 1973,
      value: 100000, ... },
    { model: 'Rolls Royce',
      year: 1965,
      value: 330000, ... }
  ]
}
```

Documents are Rich Data Structures

Fields

- first_name: 'Paul' (String)
- surname: 'Miller' (String)
- cell: '+447557505611' (Number)
- city: 'London' (String)
- location: [45.123, 47.232] (Geo-Coordinates)
- Profession: [banking, finance, trader] (Fields can contain arrays)
- cars: [
 { model: 'Bentley', year: 1973, value: 100000, ... },
 { model: 'Rolls Royce', year: 1965, value: 330000, ... }
] (Fields can contain an array of sub-documents)

Typed field values

MongoDB Data Model

39

The Basics of MongoDB

A MongoDB instance may have one or more Databases.

A database may have one or more Collections.

A collection may have zero or more Documents.

A document may have one or more Fields.

MongoDB indexes function much like their RDBMS counterparts.

40

Database Server and Client

Getting Started

Install mongodb on windows from the link given below:

<http://www.mongodb.org/downloads>

Make sure you get correct version of MongoDB depending upon your windows version.

MongoDB for Windows 64-bit: This build type of MongoDB runs on any 64-bit version of Windows latest than Windows XP, involve Windows Server 2008 R2 and Windows 7 64-bit.

42

What MongoDB does, How it works

MongoDB is a server process that runs on Windows/Linux , Os X.

It can be run both as a 32 or 64-bit application. We recommend running in 64-bit mode, since Mongo is limited to a total data size of about 2GB for all databases in 32-bit mode.

Clients connect to the MongoDB process, optionally authenticate themselves if security is turned on, and perform a sequence of actions, such as inserts, queries and updates.

Starting the MongoDB Server

Create a directory where MongoDB stores all its data.

The MongoDB default data directory path is `\data\db`.

Create the data folder in `D:\`

Set the Path.

Run `mongod.exe`

To start MongoDB server, we need to run `mongod.exe`

Starting the MongoDB Server (contd.)

```
D:\setup\mongodb>mongod.exe --dbpath "d:\setup\mongodb\data"
```

This will show **waiting for connections** message on the console output indicates that the mongod.exe process is running successfully.

Now to run the mongodb you need to open another command prompt and issue the following command.

Starting the MongoDB Server (contd.)

```
D:\set up\mongodb\bin>mongo.exe
```

- MongoDB shell version: 2.2.0
connecting to: test
- Welcome to the MongoDB shell

```
C:\appservers\mongo-1.6.3\bin\mongo.exe
MongoDB shell version: 1.6.3
connecting to: test

> show dbs
admin
cfmongodb_tests
default_db
local
mongorocks
test

> use mongorocks
switched to db mongorocks

> show collections
people
system.indexes

> db.people.findOne()
{
  "_id" : ObjectId("4cb66dae636ac4fa2045ff31"),
  "COUNTER" : NumberLong(1),
  "LOVESMONGO" : true,
  "NAME" : "Marc",
  "BIKE" : "Felt",
  "LOVESSQL" : true,
  "KIDS" : [
    {
      "NAME" : "Alexis",
      "AGE" : NumberLong(7),
      "DESCRIPTION" : "crazy",
      "HAIR" : "blonde"
    },
    {
      "NAME" : "Sidney",
      "AGE" : NumberLong(2),
      "DESCRIPTION" : "ornery",
      "HAIR" : "dirty blonde"
    }
  ],
  "WIFE" : "Heather",
  "TS" : "Wed Oct 13 2010 22:40:46 GMT-0400 (Eastern Daylight Time)"
}
```
